SUMMARY

Software engineer with 5+ years building backend and full-stack systems for fintech, enterprise SaaS, and HR/tax products. Currently designing multi-agent AI tooling that accelerates the engineering lifecycle at ADP; previously shipped payment and compliance systems handling 400+ transactions per minute and AI-powered procurement features on SAP Ariba. Strong in Node.js/TypeScript, Java/Spring Boot, AWS, and distributed system design; used to owning architecture decisions in global, cross-functional teams.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Dart, SQL

Backend & Architecture: Node.js, Spring Boot, REST APIs, Microservices, Serverless & Event-Driven Architecture, System Design, SAP CAP

AI Engineering: LLM integration, AI agents & multi-agent orchestration, agent harnesses & evaluation loops, vector search

Cloud, Data & Testing: AWS (Lambda, EC2, SQS), SAP BTP, Docker, CI/CD, PostgreSQL, MongoDB, Jest, JUnit, Spock

Frontend & Mobile: React, Next.js, Flutter, SAP UI5

PROFESSIONAL EXPERIENCE

Senior Software Engineer

Mar 2025 – Present

ADP (ADP Ventures / ADP Brazil Labs)

Porto Alegre, Brazil

- Core engineer on ADP's internal **AI Factory**, a platform that accelerates the software engineering lifecycle through multi-agent orchestration: agents plan, execute, validate, and review code changes across multiple LLM providers.
- Own parts of the platform architecture: define how agents collaborate (agent harnesses, engineering loops, validation and review stages) and turn ambiguous engineering problems into tools developers use in real workflows.
- Cut engineering efforts previously scoped at several weeks to about one week, while keeping quality and model cost under control.
- Previously one of the main engineers on **ADP MyTax** (automated estimated tax payments for US freelancers): built the React web platform and Node.js backend on AWS, including bank integrations and IRS payments; helped architect the Flutter app replacing it.
- Mentor junior and mid-level engineers on system design and cloud-native development practices.

Development Consultant, SAP Ariba

Feb 2024 – Mar 2025

SAP

Brazil

- Built backend services for **SAP Ariba Category Management**, a strategic procurement platform used by multinational enterprises, with Java, Spring Boot, Node.js, and SAP CAP on SAP BTP, handling complex business rules and multi-system integrations.
- Implemented **AI-powered category strategy recommendations** that automated market insights and strategic planning for procurement teams, adopted by customers in the automotive, aviation, and technology sectors.
- Contributed to architecture decisions and code reviews in a global team, supported other developers through complex technical problems, and delivered full-stack features with SAP UI5.

Full Stack Developer (Intern → Developer I → Developer II)

Dec 2021 – Jan 2024

Bazk (formerly safepag) – payment gateway for local and cross-border e-commerce

Porto Alegre, Brazil

- Worked on payment and compliance systems processing **400+ transactions per minute** for international gaming and betting platforms, where reliability, security, and observability directly affected real money; promoted twice in two years.
- Designed and built a **compliance rules engine** in Node.js that automated transaction and regulatory checks and fraud detection, reducing manual verification work.
- Migrated critical financial services from a legacy stack to Java/Spring Boot on AWS (Lambda, EC2, SQS) with PostgreSQL and MongoDB, improving scalability and resilience.
- Built a real-time monitoring dashboard, a fraud-investigation admin panel, and an optimized checkout flow in React; strengthened reliability with automated test suites (Jest, JUnit, Spock) and production monitoring.

Full Stack Developer (Trainee)

Sep 2018 – Mar 2019

Pling Brasil – software development startup

Porto Alegre, Brazil

- Built **Universos**, a web-scraping news aggregator, end to end with a small team: Node.js/TypeScript REST APIs, MongoDB, React UI.

EDUCATION, CERTIFICATIONS & LANGUAGES

B.Sc. in Software Engineering

2021 – 2026

PUCRS – Pontifícia Universidade Católica do Rio Grande do Sul

Porto Alegre, Brazil

- Thesis approved with the highest grade; completed all four levels of AGES, the university's hands-on software engineering agency.

MBA in Cybersecurity, USP/Esalq

Oct 2026 – 2028 (in progress)

Certifications: SAP Certified Associate – Backend Developer (SAP CAP), 2024; SAP Certified Associate – Integration Developer, 2024

Languages: Portuguese (native), English (C1), German (A2)
